

We represent expertise in the design and manufacture of flexible, ultra thin and power efficient electronic platforms for medical, financial and security sectors.

Design to Production:

We specialize in design, component processing, assembly, qualification, lamination and mass production manufacturing

Bespoke solutions:

We develop and manufacture solutions for our customers according to their requirements

Ideas to products:

Our experienced team will help you to turn your ideas and needs into reliable and mass-produced products

We miniaturize medical products and devices making them, smaller, thinner and even flexible.

Our customers are able to significantly reduce their product footprint and prices. Our approach combines lowest entry costs with minimal risks.

SERVICES

- EMBEDDED ELECTRONIC PLATFORMS
Custom design of embedded electronic platforms including embedded sensors, and medical patches
- APPLICATION PROGRAMMING
